

Unit 14 Public, Private, Joint and Cooperative Sectors

Structure:

- 14.1 Introduction
 - Objectives
- 14.2 Public sectors
 - Growth and performance of public sector enterprises
 - The Navratnas
- 14.3 Organization of public sector enterprises
 - Departmental Undertakings
 - Government Companies
 - Public Corporations
 - Suitable form of organization
 - Pricing policy in public sector
 - Control over public enterprises
- 14.4 Private Sector
- 14.5 Joint sectors
 - Formation of Joint sector enterprise
 - Rationale of joint sector
 - The concept of National sector
- 14.6 Cooperative sectors
 - Processing and industry cooperatives
 - Storage, distribution and manufacturing cooperatives
 - Functional cooperatives
 - Multi-purpose cooperatives
- 14.7 Summary
- 14.8 Glossary
- 14.9 Terminal Questions
- 14.10 Answers

14.1 Introduction

In the previous unit you have learnt about corporate social responsibility. Every business has to undertake these responsibilities, although the kinds of business may be different. To learn about these businesses we have to understand how they operate. In this unit we are going to learn about the various forms of enterprises. There are various types of businesses .e.g. Public sector enterprises, Private sector enterprises, Joint sector enterprises

and Co-operative sectors. Basically, the difference between these enterprises is how they are controlled and financed. We shall learn about these various forms of business in this unit. From the name we can understand that public sector enterprises are government controlled, private sector enterprises are privately controlled by individuals or a family, joint sectors are collaboration between the government and private sector, and co-operatives means collaboration of a particular group of people working in a particular field.

Objectives:

After studying this chapter you should be able to

- define public sector enterprise.
- identify various types of public sector enterprises
- describe the growth and contribution of private sector
- discuss the formation and rationale of joint sectors
- differentiate between the various types of cooperative enterprises

14.2 Public Sector

Public sector plays an important role in the industrial development of a nation. The growth of public sector led to the growth of (SOEs), State owned enterprises in India. Industrial Policy Regulations 1956 & 1991, gave the public sector a strategic role in the Indian economy. It was the conscious decision of the government to speed up the industrialization of the country so as to boost economic growth and to achieve certain socio-economic goals. Basic and heavy industries like coal, steel, petroleum, heavy engineering, chemicals, fertilizers etc., became the monopoly of the public sector. Consumer goods, financial services, trading and marketing activities, development of small industries etc., are also a part of public sector enterprises.

Public sector enterprises help the government and the country in the following ways:

- a. To promote economic growth and industrialization of the country by creating necessary infrastructure.
- b. To promote redistribution of income and wealth.
- c. To create more employment opportunities.
- d. To help the small scale industries.
- e. To promote import substitution, thereby, save and earn foreign exchange.

14.2.1 Growth and Performance of Public Sector Enterprises

The role of public sector in the industrialization and economic development of the country is noteworthy. Manufacture of arms and ammunition, the production and control of atomic energy and railways come under the monopoly of the central government. This was clearly stated in the industrial Policy Resolution of 1948. Another six industries which come under public sector are coal, iron and steel, aircraft manufacture, ship building, manufacturing of telephones, telegraphs and wireless apparatus.

Since the commencement of planning, public sector has shown a substantial growth in many fields. During the first five year plan (1951) the government allotted Rs. 29 crores in five units for public sector enterprises. This was increased to Rs. 118,492 crores at the commencement of the eighth plan (1992) in 237 units. At the end of March 2007 it became 421,089 crores in 244 units. The steel, coal, minerals and metals, power and petroleum sectors constitute a major part of the central public sector investment. They play an important role in the development of the country. The performance of the public sector has been far from satisfactory. Massive investments have gone into PSEs. However, the question arises whether the contribution made by these industries has been adequate and to what extent these enterprises have been consumer friendly?

Many PSUs have run into huge losses. The losses have been in non-priority sectors or the sectors where the private sector has proved to be more effective. Many of these loss making units are sick units. The factors which contribute to the unsatisfactory performance of public enterprises are as follows:

- a. Huge cost and time for implementation of projects due to various issues like land acquisition, procurement of equipment, civil works etc.
- b. Wrong location and investment decisions.
- c. Choice of technology in the fertilizer sector.
- d. Uneconomical pricing reduced the internal resource generation in the power sector.
- e. Allocation of resources and delays in filling up of top level posts.
- f. Restrictions in respect of labour and wage policy etc., are some of the problems faced by the PSEs

14.2.2 The Navratnas

In July 1997, the government decided to grant autonomy to some PSUs on experimental basis. The purpose of this was to select and support some PSUs to become global giants. After discussions and meetings with ministers, the government selected nine PSUs for making them world class entities and named these PSUs as “Navaratnas”. These are:

- a. (BHEL) – Bharat Heavy Electrical Limited
- b. (BPCL) – Bharat Petroleum Corporation Limited
- c. (HPCL) – Hindustan Petroleum Corporation Limited
- d. (IOC) – Indian Oil Corporation Limited
- e. (IPCL) – Indian Petrochemical Corporation Limited
- f. (ONGC) – Oil and Natural Gas Corporation Limited
- g. (NTPC) – National Thermal Power Corporation
- h. (SAIL) – Steel Authority of India Limited
- i. (VSNL) – Videsh Sanchar Nigam Limited

Later GAIL, MTNL, BEL, HAL, PEC were also given Navratnas status. According to this status, these PSEs would have the freedom to incur capital expenditure, they can decide upon joint ventures, they can set up subsidiaries abroad, can enter into strategic and technological alliances, raise funds from capital markets and can enjoy substantial operational and managerial autonomy. The government has given these facilities to make these enterprises competitive. Some 97 other profit making enterprises have also been given mini-ratna status to make them more efficient and competitive.

Self Assessment Questions

1. The public sector strives to promote redistribution of _____ and _____.
2. In the non-priority areas _____ sector has proved to be more effective.
3. Initially only _____ PSUs were given Navratnas status.
4. Other profit making enterprises were given the status of _____.

Activity

Make a list of Navaratna and mini Ratna companies in your state.

14.3 Organization of Public Sector Enterprises

In India public sector enterprises have been organized as follows:

Ministry – Ministry of Railways manages the Indian Railways. It undertakes and manages all the investment and entities connected with the railway transport of the country. Indian railway has its own budget. This budget has to be presented and approved by the parliament. The railway ministry is headed by the minister of railways. The railway board is headed by a chairman. It also includes three members and a finance commissioner. These two personnel have the status of secretary to the Indian government. Similarly other ministries have control over their PSUs.

14.3.1 Departmental Undertakings

The important characteristics of Departmental Undertakings are:

- a. Major share of the revenue is paid into the treasury as it is financed by the annual appropriations from the treasury.
- b. Government activities like budget, accounting and audit controls are also applicable to departmental undertakings.
- c. Its permanent staff consists of civil servants. The recruitment process is the same as for other civil servants.
- d. The procedure for filing suits against it, is the same as against the government.

It is directly subordinate to a Ministry. The Army clothing factory, the Harness and Saddlery factory, the Gun Carriage factory and the Ishapore Ordnance Factory under the Ministry of Defence are some of the examples of the departmental form of organization and management. Factories which come under the Ministry of Railways are Chittaranjan locomotive works and Integral coach Factory. Posts and telegraphs come under the Ministry of Communications.

14.3.2 Government Company

According to the study team on Public Sector Undertakings the important characteristics of a Government Company are:

- a. Public sector Undertakings have most of the features of the private sector limited companies.
- b. The Government owns major portion of the capital stock or 51 percent or more.
- c. Depending upon the participation of private capital in enterprises, majority of the directors are appointed by the Government.

- d. It is a body corporate created under a general law i.e. The Company's Act.
- e. In its own name, it can sue and be sued, enter into contracts and can acquire property.
- f. It is created by an executive decision of the Government without the specific approval of the parliament.
- g. The Government provides funds, and sometimes private shareholders, and from revenues from the sale of its goods and services.
- h. It is generally exempted from the budget, accounting, personnel and audit laws and procedures applicable to the Government Departments.
- i. Its employees, other than on deputation, are not considered civil servants.

The important defects of a Government company by the study team on PSUs are as follows:

- a. A Government company does not fulfill the responsibilities which a state-owned enterprise should have, to Government and Parliament.
- b. Most of the functions of the companies are reserved to the Government. So the law regulating limited companies become more or less fiction.
- c. The declaration of the profits and appointments to the Board are reserved to the Government. So the meeting of shareholders of a Government company doesn't have any importance. The autonomy given to the Government Company can be altered by the executive agencies of the Government.

A company is regarded as a government company if the Government owns at least 51 percent of the capital stock. They are also called "mixed" or "Joint" companies. In such companies the management is controlled by the government; examples are Ashok Hotel and Hindustan Shipyard Limited.

14.3.3 Public Corporation

According to the study team on Public Sector Undertakings, the important characteristics of the Public Corporation or Statutory Corporation are as follows:

- a. All the objectives, powers and privileges, form of management and its relationship with government departments of Public Corporation is created by a special law.

- b. It can sue and be sued. It can enter into contracts and acquire property in its own name.
- c. It gets funds by borrowing from the Government, from the public, through cash from sale of goods and services. It has the authority to use and re-use its revenue.
- d. Normally it is not subject to the accounting and audit laws, budgets and procedures which are applicable to government departments.
- e. Most of the employees are not civil servants, other than the officers on deputation who are from government departments.

The Public Corporation has been the common form of organization for public enterprises in most of the democratic countries. The USA, Canada and the UK have adopted the form of Public Corporation. The operating units and sub-holding companies are controlled by the two top management institutions. They are the ENP and IRIL. In India, the Government directly holds the shares, and it is subject to both the state managements and private enterprises.

Holding Company

The Study Team also pointed out that integrated public authority should be created for particular sectors of industry. They should be responsible for the general development of the sectors concerned. It includes the running of undertakings in those sectors and setting up of new projects. The Team also recommended the setting up of Integral Public Corporation.

The advantages of the setting up of Integral Public Corporation are as follows:

- a. It helps the growth and development of each industry in the Public Sector.
- b. The Integral Corporation will take care of most of the functions of the company. It reduces the control of the government on the company.
- c. The control of the government will be more effective because it can concentrate on more important and strategic points. The government can also ensure that the policy formulated by it, is implemented by the management.
- d. It will promote better personnel management and greater uniformity in public enterprises in the terms and conditions of service of the employers.

- e. The Public Corporation will be able to avail of the economies of large scale operations. It will also be easy for it to establish common service facilities like training for a particular requirement of the industry, purchase, sales and to organize in a more effective way.
- f. It can retain and attract suitable personnel by increasing the capacity of these enterprises.
- g. The Public Corporation will help in more rational deployment of personnel, proper utilization of designing and construction and the use of expensive construction equipment.

14.3.4 Suitable Form of Organization

The Study Team on Public Sector Undertakings recommended the following facts for a suitable form of organization.

- a. **Industrial and Manufacturing Undertakings:** All public undertakings in the industrial and manufacturing field should be given to Public Corporations. The company form of units will be retained, if there is private participation in it. But the company's State owned shares should come under the name of public corporations and should not be owned by the Government.
- b. **Public Utilities and Services:** The Public Corporation is more suitable for public utilities and services. They require greater statutory authority for their operations. The statutes of the present corporations should be revised. It will lead to autonomy and flexibility which will benefit the community in general.
- c. **Promotional and Developmental Undertakings:** The objectives of Promotional and Developmental Undertakings are non-commercial, although the operations are to be carried, on commercial lines and not on departmental lines.
- d. **Commercial and Trading Concerns:** These act as instruments for the social regulation of trade and business in their respective fields. These undertakings compete with private sectors and so retaining the company form of organization can be justified.

14.3.5 Pricing Policy in Public Enterprises:

The basic issues in public sector pricing policy are as follows:

- a. What should be the pricing policy, if the PSUs are not required to make a profit?

- b. Whether it is average, marginal, non-profit or no-loss pricing?
- c. Should they earn profits?
- d. What should be their profit level?
- e. Should the PSUs exploit the market to the maximum?

Now, let's understand the important theories of pricing. The issues will be clearer when we go through these theories of public sector pricing.

- a. **Marginal Cost Pricing:** Marginal cost pricing is the method of setting prices where price is made equal to the marginal cost of production. Professor Harold Hotelling first advocated the Marginal Cost pricing theory in his article "The General welfare in relation to the problems of taxation and of railway and utility rates" It was published in 'Econometrical' in 1938. In this article he stated that normally State has to finance the loss made by the public utilities. But by adopting the marginal cost pricing, the total economic welfare would be increased.
- b. **Average Cost Pricing:** This is the method in which price is equal to the average cost of production. In this total revenue equals total cost. Average cost pricing ensures the absorption of the full cost of production into the price. Normal profit is included by calculating the total cost. Hence the average cost also includes the normal profit. Average cost price is therefore a little higher than the no profit no loss price.
- c. **No Profit no Loss Pricing:** This means the price should be fixed in such a way that there will be neither any profit nor any loss. The price should just cover all the costs of production. Unlike the average cost pricing this does not provide for normal profit. Unlike marginal cost pricing, this pricing does not require any subsidy as there is no deficit in the revenue because the total revenue is equal to total cost. The consumer in this case just pays the actual cost of consumption.
- d. **Profit Making Pricing:** This theory suggests that the prices should be high enough to gain some profit after absorbing all the costs. It has been accepted widely that public sector enterprises should make some profit to finance future developmental plans.

14.3.6 Control over Public Enterprises

Parliament holds control over the public enterprises in India by holding debate in parliament or by moving resolution on any topic or demanding an

explanation from the minister and also exercises control through various parliamentary committees. The committee on public undertakings (CPU) examines the functions of public sector enterprises. The main job of the committee (CPU) is as follows:

- a. To examine the reports and accounts of the public enterprises.
- b. To examine Comptroller and Auditor General (CAG) of India report on PSEs
- c. To examine the autonomy and efficiency of public enterprises.

Department of Public Enterprises: The department of public enterprises is a nodal agency for all PSEs and assists in policy making. The important role of the department is as follows:

- a. General Policy related to public sector.
- b. Policy guidelines for PSEs in areas like financial management, personal management, industrial relations, training and wages etc.
- c. Takes up matter related to reservations of posts in the PSEs.
- d. To act as a repository of data to bring out annual survey for the parliament.
- e. Policy matters related to composition of board of directors and top posts of PSEs.
- f. Disinvestment policy on PSEs
- g. Policy related to deputation of government officers to PSEs
- h. Monitoring the performance of sick PSEs.

Self Assessment Questions

5. Overall control of the PSUs remains with the respective _____.
6. A Public Corporation can enter into _____ and _____ in its own name.
7. Integral Corporation reduces the _____ control of the Government on the company.
8. _____ examines the functions of public sector enterprises.
9. Department of Public Enterprise acts as a _____ to bring out annual survey.

14.4 Private Sector

Private sector too has an important role to play in a mixed economy. Because of the positive role of the private sector and also some limitation of

the public sector many socialists advocate a mixed economic system. The private sector is assigned and expected to play a very important role in a country.

The Industrial Policy Resolution has made it very clear that private sector enterprises have to fit into the framework of the social and economic policies of the State. Government of India has generally allowed such undertakings to develop, with as much freedom as possible, keeping in mind the objectives of a national plan. It is the policy of the State to give fair and equal treatment to both the public and the private sectors. The control of the government still remains by regulating the operation and development of the private sector in public interest.

Big industrial houses and MNCs are subjected to a number of checks and control. The government policy prefers small and new entrepreneurs to large industrial houses in private sectors, wherever possible. Private sector has been dominant in production of consumer goods. It also plays an important role in capital goods industry as it functions side by side with the public sector. After globalization and liberalization, now private enterprise is allowed in almost all the industries barring a few.

The economic reforms introduced in the early 1990s, brought many changes to the private sector in India. The usage of the phrases 'company' and 'corporate' has been common since the great economic reforms of 1990s. The government of India has been trying various measures to boost the private sector. The growth of private sector is bringing growth to Indian economy. The investment scenario in India is quite different now from the past (before 1990s).

The government is now easing the regulation over the FDI limits, since the Private sector not only boosts the economy but also affects the foreign reserves. The investment from foreign countries in India will boost the economy. However, the fact remains that the private participation is based on profit motive. The contribution from the private sector to the economy can't be denied. The third sector of the economy, 'service sector', has become one of the major sectors contributing to the GDP of India. The growth of the private sector has a positive effect on the employment rate in India.

Self Assessment Questions

10. Many socialists advocate a _____ economic system.
11. The government retains the control by regulating the _____ and _____ of the private sector.
12. Third sector of the economy is _____ sector.

14.5 Joint Sectors

The enterprises owned and managed by both the government and public sector and the private sectors are called joint sectors.

14.5.1 Formation of Joint Sector Enterprises

Joint sector enterprises can be formed in the following ways;

- a. Private entrepreneurs and the central government can jointly set up new enterprises.
- b. Both the central government and one or more state governments alongwith private sector can start new enterprises.
- c. New companies can be set up by the state governments or their industrial development corporations along with private partners.
- d. It is possible for public financial institutions to transform those companies owned by private entrepreneurs into joint sectors. This can be done through equity participation, conversion of loans or debentures into equity.
- e. Through the sale of some equity shares to private entrepreneurs or to the general public, the present public sector companies can be transformed into joint sector enterprise.

14.5.2 Rationale of Joint Sector

The advantages of the joint sector are:

- a. Promotion of mixed economy: To achieve developmental objectives: the joint sector will help the promotion of mixed economy.
- b. Curbing concentration of economic power: According to Dutt committee, joint sector is an important means of reducing concentration of economic power. Joint sector is more effective than licensing, in achieving the objectives.
- c. Broadening of entrepreneurship: Joint sector helps broad based entrepreneurship by encouraging new and small enterprises. The joint

sector helps budding entrepreneurs who have less financial resources and do not have much experience to take part in large enterprises, such as public sector shares, investment and risk.

- d. Social control of industry: The participation of Government in equity and management gives social orientation to the industry. It is the duty of the joint sector to ensure that the overall policies laid down by the Government are followed by the management of the industry. The main motive of the enterprise should be the interest of the public and not merely profit making.
- e. Acceleration of economic development: The increase in economic development can be made possible by mobilizing and augmenting the productive resources. This helps the private entrepreneurs and state agencies to invest in large number of projects.

14.5.3 The Concept of National Sector

In 1975, the then Union Minister for Industries Sri T. A. Pai suggested the replacement of the public sector by that of the National Sector. Mr. Pai proposed that the public sector enterprises might sell 49 percent of their shares to the private enterprises. These shares should be sold to the workers and middle income groups.

Sri Pai's concept of National Sector is widely accepted in the present scenario mainly because, in the National Sector workers and the middle class have considerable stake and so they are expected to work more efficiently than the Public Sector.

Self Assessment Questions

State whether the following statements are True or False:

- 13. The joint sector will help the promotion of mixed economy.
(True /False)
- 14. The state government cannot start a joint sector enterprise.
(True / False)
- 15. Joint sector helps broad based entrepreneurship by encouraging new and small enterprises. (True/ False)
- 16. Social control of industry cannot be achieved by Joint sector.
(True/False)

14.6 Co- operative Sector

Co-operative Sector has a very important role in the development of many other sectors. The Co-operative sector includes agriculture, retail distribution, housing, rural and small scale industry etc.

The important objectives of the development of the Co-operative Sector are:

- a. Active participation of people in development programs.
- b. Prevention of concentration of economic power.
- c. Eradication of unemployment, poverty etc.
- d. Augmentation of productive resources.
- e. Growth of economic development and so on.

There are so many ways in which the State promotes the co-operative movement in India. They are as follows:

- a. Give loans to societies
- b. Give tax concessions
- c. Help in training and education
- d. Give contribution to risk fund
- e. Give subsidies and grants
- f. The Reserve Bank and other banks help the Co-operative Sector in many ways.
- g. The State also gives legal concessions and sanctions.

In 1904, the Co- operative Sector came into existence, when the Co-operative Credit Societies Act was passed. It helps the registration of credit societies in rural areas. In 1912, this Act provided for the registration of non-credit societies as well as federations of co-operatives. After 1912, there has been a tremendous growth in co-operative sectors in the fields of agricultural credit, marketing and processing of agricultural products, and supply and distribution of consumer goods. Over 96 percent of the rural areas come under agricultural credit societies.

14.6.1 Processing and industrial Co-operatives

The role of the co-operative sector in developing cottage, village and small scale industries is noteworthy. Certain industries like sugar, jute, cotton are ideally suited for co-operative sector. Today, millions of people are members of the industrial co-operative sectors. There are two different patterns of units established in the co-operative sectors:

- a. Units established by independent processing units.
- b. Units established as adjunct to co-operative marketing societies.

The larger units come under the first category, e.g. spinning mills, co-operative sugar factories and solvent extraction plants etc.

The smaller and medium units come under the second category e.g. oil mills, rice mills and jute bailing mills etc.

The Indian Farmers Fertilizer Cooperative Limited (IFFCO) is an important venture of the co-operative movement in India in the field of large scale fertilizer manufacture. Many industries like sugar, cotton textiles etc., also have their presence in co-operative sectors.

14.6.2 Storage, Distribution and Marketing Co-operatives

The promotion, planning and financing of the co-operative sectors are done by the national co-operative development corporation. There are plenty of cold storage units, rural godowns and marketing godowns. In the field of distribution of agricultural inputs such as seeds, pesticides and fertilizers etc., co-operatives in India play an important role.

The National Agricultural Co-operative Marketing Federation (NAFED) represents the co-operative marketing societies in the country. It promotes interstate and export trade of the products.

14.6.3 Functional Co-operatives

More employment and income opportunities to various sections of the society are provided by the co-operatives especially to the weaker sections of the society. Small and marginal farmers, fishermen etc., come under this category. Functional co-operatives for fisheries, poultry and dairy are mainly related to the service to weaker sections.

14.6.4 Multipurpose Co-operatives

The primary co-operatives in the tribal areas were reorganized in order to provide economic development to tribals. They function as multipurpose societies. They provide short, medium and long term credit to tribals, help in the collection and marketing of agricultural products, help in the supply of agricultural inputs and consumer goods. State level co-operative tribal development corporations or federations have come into being in various states. They serve as apex organisation and help in the marketing of minor forest produce and consumer goods.

Self Assessment Questions

17. The state gives legal _____ and _____ to co-operative sectors.
18. One of the important objectives of the Co-operative Sector is eradication of _____ and _____.
19. IFFCO is related to manufacturing of _____.
20. Functional co-operatives for fisheries, poultry and dairy are mainly related to the service of _____.

14.7 Summary

- The industrial sector of India can be broadly divided into public, private, joint and co-operative sectors.
- The industrial policy resolution of 1948 reserved eight industries to the public sector. Industrial policy regulation of 1956 raised it to seventeen. Among these twelve industries are State owned.
- The State has a major role to play in establishing new units.
- Until 1991, public sector in India showed a substantial growth. Nationalization also played a vital role in the growth of the public sector.
- The industrial policy in 1991 led to the economic liberalization, which resulted in the growth of the private sector.
- The joint sector and the Co-operative sectors have also been promoted by the government along with the public sector. This helps to prevent the concentration of economic power only in private sectors.
- With almost all the sectors open to private sector, current policy has no specific inclination towards public, joint or co-operative sectors.

14.8 Glossary

- **Public Corporation:** An entity controlled by a government that operates in the non-financial or financial sector as a for-profit entity. The only shareholder is the government on behalf of the public.
- **Private Corporation:** A non-financial or financial corporation that is not controlled by a government
- **Corporate Sector:** A larger domain of statistical observation that aggregates the non-financial corporations sector and the financial corporations sector.

- **Enterprise:** Represents the complete organizational composition of a business entity. An enterprise unit is capable of providing consolidated financial statements that account for the entire organization. It is the equivalent of an institutional unit.
- **Shareholders:** Owners of a business who have a direct stake in it.
- **Stock:** Securities issued by corporate organizations, offered to individuals and institutional investors.
- **Wages and Salaries:** Wages and salaries include directors' fees, bonuses, commissions, gratuities, income in kind, taxable allowances, and retroactive wage payments. Wages and salaries are estimated on a gross basis, that is, before deductions for employees' contributions to income tax, unemployment insurance, or pension plans. Wages and salaries accumulating over time, for example, retroactive payments, are accounted for, in the month and year in which they are paid. Supplementary labour income, such as employer contributions to pension, medical or similar plans are not included.
- **Tax:** Compulsory levy imposed by the government on individuals or economic units.

14.9 Terminal Questions

1. In what ways does the public sector help the government and the country?
2. What are the important characteristics of Departmental Undertakings?
3. What are the important characteristics of the Government Company?
4. List out the important characteristics of the Public Corporation or Statutory Corporation.
5. Write a note on suitable form of organization.
6. Write a short note on private sector.
7. List out the advantages of joint sector.
8. Write short notes on the following:
 - a. Processing and industrial co-operatives
 - b. Storage, distribution and marketing co-operatives
 - c. Functional Co-operatives
 - d. Multipurpose Co-operatives

14.10 Answers**Self Assessment Questions**

1. income, wealth
2. Private
3. Nine
4. Mini- Ratnas
5. Ministry
6. contracts, acquire property
7. control
8. committee on public undertakings (CPU)
9. repository of data
10. mixed
11. operation, development
12. service
13. True
14. False
15. True
16. False
17. concessions, sanctions
18. Unemployment, poverty
19. Fertilizers
20. Weaker section

Terminal Questions

1. Please refer to sec no 14.2
2. Please refer to sec no 14.3.1
3. Please refer to sec no 14.3.2
4. Please refer to sec no 14.3.3
5. Please refer to sec no 14.3.4
6. Please refer to sec no 14.4
7. Please refer to sec no 14.5.2
8.
 - a. Please refer to sec no 14.6.1
 - b. Please refer to sec no 14.6.2
 - c. Please refer to sec no 14.6.3
 - d. Please refer to sec no 14.6.4
